

Proposition Learn - New and Innovative Program Offerings

Approval of Proposition Learn will provide the District with the resources to offer new programming and innovative courses in areas like Science, Technology, Engineering, and Math (STEM). While we tend to think of these offerings in our high schools, it would also provide the opportunity to increase STEM programming as part of the school day at every level.

FHSD would be able to offer more technical, online, and high school to career pathways courses. These new offerings will help our students be more college and career ready when they graduate and are exactly the types of programs that our community told us they want during the strategic planning process.

Real world applications, internships/apprenticeships, and student-driven personalized learning are all emerging teaching practices that will help our students to master the “Four C’s” (critical thinking, communication, collaboration, and creativity) and prepare them for the workforce in a global society.
